Campaign Overview

EXECUTIVE OVERVIEW

This campaign finds a generally favorable but uneven retention foundation among the surveyed sales team. Ratings were mostly favorable for likelihood of staying, leadership communication, perceived value, workload sustainability, career clarity, and confidence in leadership action. At the same time, lower responses appeared in every rating area, collaboration experiences ranged from strong to rarely collaborative, and no single attrition driver dominated. Across the qualitative evidence, coaching consistency, recognition fairness, and uneven SPIFF communication emerged as the clearest retention-related signals.

The practical priority is to determine whether these concerns reflect local manager execution, regional communication processes, incentive design, or broader leadership practices. The evidence supports targeted validation rather than a conclusion that one factor is causing attrition. Interpretation is limited by the small five-person bases, repetitive qualitative material, limited direct evidence about intent to leave, and the absence of information passed from the first linked stage to the second.

KEY INSIGHTS

Retention conditions are broadly positive but not uniformly secure

Most survey ratings were favorable, but every rating distribution included a lower response, indicating meaningful variation within the group.

Sources: Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report

Coaching consistency and recognition fairness are recurring concerns

Both sessions identify consistency and fairness as retention-related issues, with coaching routines and SPIFF communication repeatedly identified as practical examples.

Sources: Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report; Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report

Attrition drivers appear multi-factor rather than concentrated

Leadership support, compensation and recognition, career growth, workload, and collaboration each received one selection in the survey, while the discussion evidence did not establish a single primary cause.

Sources: Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report; Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report

Collaboration and cross-regional communication are inconsistent experiences

Survey responses covered the full collaboration scale, while the discussion stage repeatedly raised uneven SPIFF communication across regions as a concrete consistency concern.

Sources: Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report; Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report

WHAT TO WATCH

The evidence base is small, and the discussion-stage AI-derived scores are based largely on inferred concern signals rather than direct assessments of morale, trust, cohesion, or retention intent. The repeated qualitative wording limits differentiation between coaching and recognition issues and does not show whether concerns are systemic or local. No information was passed from Step 1 to Step 2, so the sequence should not be interpreted as a test of change over time.

SAMPLE REPORT

Campaign Findings

Retention outlook and confidence in leadership follow-through COMPLEMENTARY

Finding:

The sales team shows a generally favorable retention foundation, but confidence is not universal. Most survey responses were favorable for staying, leadership communication, and confidence that leadership will act, while each measure included a lower or middle response. The discussion stage raised retention-related concern signals but did not establish active job searching, plans to leave, or firm commitment to stay.

Supporting Evidence:

For likelihood of remaining on the sales team for 12 months, responses ranged from 4 through 8, with three of five responses in the 6–8 range and one response at 4. Leadership communication had four of five responses in the 6–10 range and one at 4. Confidence that leadership would act had three of five responses in the 6–10 range, with one at 4 and one at 5.
Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report · Retention likelihood; leadership communication; confidence in leadership action

The discussion report states that participants did not directly describe active job searching, plans to leave, or firm commitment to stay. Its Retention Risk AI-derived score was 54.8 across five contributors, reflecting concern signals with substantial uncertainty rather than confirmed departure plans.
Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report · Session Overview and Engagement Metrics: Retention Risk

Relationship Across Sessions:

Complementary — The survey provides direct ratings of retention outlook, leadership communication, and action confidence. The discussion stage complements those results by identifying fairness, coaching consistency, and communication as possible conditions affecting retention, while also noting that direct attrition intent was not discussed.

Differences and Limitations:

The survey ratings are direct participant responses, whereas the discussion-stage Retention Risk score is AI-derived and explicitly uncertain. The two sessions do not use the same instrument, and the discussion did not provide direct evidence of personal attrition intent.

Implication:

Leadership should treat retention as a prevention and validation issue rather than an established crisis: preserve favorable conditions while identifying the lower-experience groups and testing whether perceived inconsistency affects commitment.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

Coaching, recognition, and perceived fairness AGREEMENT

Finding:

Coaching consistency and recognition fairness are the most consistent qualitative signals across the campaign. Survey responses repeatedly pointed to clearer coaching rituals and fairer SPIFF rules, while discussion participants connected coaching, recognition, and incentive communication with the broader sales experience. The evidence does not establish whether coaching or recognition is the more important driver.

Supporting Evidence:

All five text responses to the question about reducing attrition converged on clearer coaching rituals and fairer SPIFF rules. Perceived value was favorable overall, with three of five responses in the 6–10 range but responses also at 4 and 5.
Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report · Change that would most reduce attrition; perceived value for deals and pipeline work

Across five one-on-one discussions, participants consistently identified coaching consistency and recognition fairness as retention-related considerations and repeatedly cited uneven SPIFF communication across regions. The report includes the exact statement: "From my seat, coaching consistency and recognition fairness matter most."
Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report · Session Overview; Discussion Topic: Leadership Support And Communication Effectiveness

Relationship Across Sessions:

Agreement — Both sessions independently identify consistency and fairness as important retention-related considerations. The survey emphasizes clearer coaching routines and fairer SPIFF rules; the discussion stage adds uneven SPIFF communication across regions as the clearest concrete example. No information was passed from the survey into the discussion stage, so the agreement is thematic rather than evidence of a tested progression.

Differences and Limitations:

The survey suggests a shared direction but provides repetitive, minimally differentiated examples. The discussion stage identifies regional communication inconsistency but does not distinguish communication timing, eligibility, access, payout outcomes, manager behavior, or incentive policy as the source. Neither session establishes personal impact or organizational scope.

Illustrative Quotes:

> *"From my seat, coaching consistency and recognition fairness matter most."*
>
> Participant P001 · S1149 · Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report · Transcript

Implication:

The first operational priority should be to clarify how coaching expectations and SPIFF information are delivered, determine where fairness breaks down, and avoid changing incentive design before the source of the concern is established.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

Collaboration and work environment consistency COMPLEMENTARY

Finding:

Collaboration is the most visibly divided direct survey experience, while the discussion evidence offers only limited direct information about team relationships or day-to-day coordination. The campaign therefore indicates inconsistent collaboration experiences but cannot determine whether the issue is caused by handoffs, regional communication, manager practices, or isolated relationships.

Supporting Evidence:

All five collaboration categories were selected once, ranging from strong and reliable to rarely collaborative. The report interprets this as substantial variation rather than a shared team norm.
Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report · Collaboration within the sales team and with CS/SE partners

Participants provided limited direct evidence about peer collaboration, belonging, psychological safety, conflict, or day-to-day team climate. Uneven SPIFF communication across regions was the available coordination-related signal, but its effect on team dynamics was not established.
Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report · Discussion Topic: Work Environment And Team Collaboration Dynamics

Relationship Across Sessions:

Complementary — The survey directly measures collaboration and shows responses across the full available range. The discussion stage does not directly validate collaboration quality, but it adds a broader consistency concern through uneven regional SPIFF communication. These findings are related through consistency but do not establish the same underlying problem.

Differences and Limitations:

The survey contains a direct collaboration measure; the discussion stage largely did not explore collaboration and should not be treated as confirming a team cohesion problem. The five-person survey base prevents conclusions about particular teams, regions, or partner groups.

Implication:

Leadership should map a small number of recent sales-to-CS/SE handoffs and compare effective, blocked, and inconsistent cases before selecting team-process or manager interventions.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

Multiple possible attrition drivers and unresolved scope

COMPLEMENTARY

Finding:

The evidence does not identify one dominant attrition driver. The survey distributes selections evenly across leadership support, compensation and recognition, career growth, workload and work-life balance, and team collaboration. The discussion stage narrows attention toward fairness and consistency but leaves the organizational source and impact unresolved.

Supporting Evidence:

Each of the five offered attrition areas received one response: leadership support, compensation and recognition, career growth, workload and work-life balance, and team collaboration.
Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report · Which area most drives sales team attrition in your experience?

Participants applied the same fairness and consistency concern across leadership, work environment, and compensation-related topics, but the report states that the evidence does not distinguish local execution, regional policy, incentive design, or broader leadership practice.
Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report · Session Overview and Conclusions

Relationship Across Sessions:

Complementary — The survey establishes that the offered drivers are evenly distributed in the five-response base. The discussion stage adds depth around one cross-cutting concern—consistency in coaching, recognition, and SPIFF communication—but does not overturn the survey's multi-factor result or establish that fairness is the primary cause.

Differences and Limitations:

The survey's equal distribution is based on five responses and does not measure relative severity. The discussion stage provides thematic depth but limited detail on benefits, workload, career development, direct compensation outcomes, manager behavior, or personal retention consequences.

Illustrative Quotes:

> *"Concrete example — uneven SPIFF communication across regions."*
>
> Participant P001 · S1149 · Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report · Transcript

Implication:

Retention planning should use a targeted diagnostic approach: validate the recurring fairness concern while separately measuring career support, workload, compensation outcomes, collaboration, and direct intent to stay.

Results Across Linked Sessions

The linked sequence contains two stages, but the connection was not operationalized as a handoff of findings. Step 1 was generated from the campaign brief. Step 2 was created when no earlier report was available, so no information was passed into its approach. The stages therefore provide complementary evidence from a survey and one-on-one discussions, but they do not show how later participants responded to or extended an earlier finding.

Stage 1: Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey · S1150 · Survey Session Report

FIRST STAGE

Purpose:

Initial survey exploration of retention outlook, potential attrition drivers, leadership communication, collaboration, recognition, workload, career clarity, and confidence in leadership action.

Connection to earlier stages:

First stage

New learning:

Established a generally favorable but uneven retention foundation, evenly distributed attrition-driver selections, highly varied collaboration experiences, and recurring qualitative references to coaching clarity and recognition fairness.

Stage 2: Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report

NEW TOPIC

Purpose:

One-on-one exploration of retention-related experiences and possible causes across leadership, work environment, recognition, and communication.

Connection to earlier stages:

No earlier report was available when it was created; no information passed.

New learning:

Independently identified coaching consistency, recognition fairness, and uneven SPIFF communication across regions as recurring concerns, while leaving their source, personal impact, and relationship to direct attrition intent unresolved.

Interpretation limits:

Sequence alone does not establish causation or change over time. Because no information passed from S1150 to S1149, thematic overlap should not be described as later confirmation based on linked learning. The stages also use different methods, and the discussion-stage AI-derived scores are not directly comparable with the survey ratings.

AI-DERIVED SCORES

Measure	Session	Value	Response base	Definition and inclusion
Employee Morale	Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report	54.6/100; Needs attention band	n = 5 discussion contributors	AI-derived score based on available discussion evidence concerning morale-related signals; 0–100 scale, with the report classifying 0–59 as Needs attention. All five discussion accounts included; score reflects concern signals and uncertainty, not direct morale ratings.
Retention Risk	Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report	54.8/100; Needs attention band	n = 5 discussion contributors	AI-derived score based on retention-related discussion evidence; 0–100 scale, with the report classifying 0–59 as Needs attention. All five discussion accounts included; no confirmed plans to leave or active job-search statements were reported.
Trust in Leadership	Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report	52.4/100; Needs attention band	n = 5 discussion contributors	AI-derived score inferred from discussion of leadership consistency, coaching, and communication; 0–100 scale, with the report classifying 0–59 as Needs attention. All five discussion accounts included; not a direct participant rating of trust.
Career Development	Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report	49.6/100; Needs attention band	n = 5 discussion contributors	AI-derived score based on available evidence about advancement, mentoring, skill development, and mobility; 0–100 scale, with the report classifying 0–59 as Needs attention. All five discussion accounts included; score is driven substantially by limited usable evidence and is not confirmation of group-wide dissatisfaction.
Team Cohesion	Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion · S1149 · 1:1 Discussion Session Report	53.4/100; Needs attention band	n = 5 discussion contributors	AI-derived score based on available evidence about communication and team-cohesion signals; 0–100 scale, with the report classifying 0–59 as Needs attention. All five discussion accounts included; score reflects limited contextual signals rather than a direct assessment of cohesion.

Notes:

Survey ratings and AI-derived scores are reported separately and are not averaged or pooled. The S1149 scores have different evidentiary bases and should not be interpreted as directly equivalent to the S1150 participant ratings.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

Conclusions

The campaign finds a broadly favorable but uneven sales retention environment. Most direct survey ratings were positive, but lower experiences appeared across all rated areas, collaboration varied sharply, and no single attrition driver dominated. This indicates that the organization has a usable retention foundation but should not rely on aggregate positivity to identify or dismiss localized risk.

The clearest actionable signal is perceived inconsistency in coaching, recognition, and SPIFF communication, particularly across regions. Both sessions support validating this concern, but neither establishes whether the source is manager execution, regional process, incentive design, or broader leadership practice. The campaign therefore answers the objective directionally: retention work should prioritize fairness and consistency diagnostics while maintaining attention to workload, career growth, collaboration, and communication.

What remains uncertain is the personal impact of these concerns, their relationship to actual intent to leave, and whether they are systemic or concentrated in specific roles, managers, regions, or partner interfaces. The small bases and lack of information passed between linked stages further limit conclusions about prevalence or change over time.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

Suggested Next Steps

1. **Audit SPIFF communication and recognition processes across regions.**

   Why suggested:

   Uneven SPIFF communication and recognition fairness are the clearest recurring retention-related signals. The audit should compare announcement timing, eligibility explanations, channels, access to information, and documented delivery before any incentive-design changes are made.

   Supporting findings:

   Coaching, recognition, and perceived fairness (S1150; S1149); Multiple possible attrition drivers and unresolved scope (S1150; S1149).

   Validation needed:

   Verify whether differences reflect policy, regional execution, manager practice, communication timing, incentive access, or payout outcomes.

2. **Define and test consistent coaching and recognition expectations.**

   Why suggested:

   Clearer coaching rituals and fairer recognition were repeatedly identified as practical ways to reduce attrition, but the current evidence does not show how manager practices vary or which routines matter most.

   Supporting findings:

   Coaching, recognition, and perceived fairness (S1150; S1149).

   Validation needed:

   Collect differentiated examples from sellers and managers, distinguishing developmental coaching, performance coaching, recognition decisions, and incentive discussions.

3. **Map collaboration and sales-to-CS/SE handoff variation.**

   Why suggested:

   Survey responses range from strong collaboration to rarely collaborative, but the discussion stage does not explain where coordination breaks down or whether the pattern is local.

   Supporting findings:

   Collaboration and work environment consistency (S1150; S1149).

   Validation needed:

   Review recent effective and blocked handoffs by pod, region, role, and partner type where appropriate, using non-identifying segmentation.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

4. **Create a visible feedback-to-action loop for attrition concerns.**

   Why suggested:

   Confidence in leadership action is generally favorable but not universal. Communicating what is being investigated, who owns it, and what has changed can test whether demonstrated follow-through improves confidence.

   Supporting findings:

   Retention outlook and confidence in leadership follow-through (S1150; S1149).

   Validation needed:

   Agree on realistic commitments, owners, review points, and a method for distinguishing completed actions from items still under review.

5. **Repeat the measurement with broader, differentiated coverage.**

   Why suggested:

   The current five-person bases cannot establish whether lower experiences or recurring concerns cluster by role, tenure, region, manager, or team. A follow-up should preserve core survey measures while adding direct questions on retention intent and personal impact.

   Supporting findings:

   Retention outlook and confidence in leadership follow-through (S1150; S1149); Multiple possible attrition drivers and unresolved scope (S1150; S1149).

   Validation needed:

   Use larger participation and carefully designed prompts covering coaching, recognition, workload, career development, collaboration, direct attrition intent, and organizational scope.

Campaign Details and Source Reports

Campaign Objective:

Explore why members of a BD sales organization leave or consider leaving, and identify improvements that could strengthen retention, stability, and performance. The campaign focuses on leadership support and communication, team collaboration and work environment, compensation, benefits and recognition, career development and growth pathways, and workload and work-life balance, while distinguishing systemic from local issues and identifying actions leadership can take.

Configuration:

Linked campaign with two connected sessions run in sequence. Step 1, Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey (S1150), was generated from the campaign brief. Step 2, Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion (S1149), was created when no earlier report was available; no information was passed between stages. Campaign dates were November 9–16, 2026. Included source reports: S1150 and S1149. No sessions were excluded.

SESSION INVENTORY

2 of 2 campaign sessions contributed evidence. Every planned session is listed with its final status.

Session	Type	Dates	Session status	Evidence	Participation
Sales Attrition Linked — 2026-11-10 07:59 — Step 1 Survey S1150 · Survey Session Report	Survey	November 9, 2026 - November 10, 2026	Ended	**Included**	5 of 5 invited
Sales Attrition Linked — 2026-11-10 07:59 — Step 2 Discussion S1149 · 1:1 Discussion Session Report	1:1 Discussion	November 9, 2026 - November 10, 2026	Ended	**Included**	5 of 5 invited

Participation Counting Rules:

Unique Participants: Distinct people who contributed usable evidence to at least one included session. Deduplicated by participant identity across 2 included sessions.
Total Session Participations: Contributions summed across included sessions. One person in two sessions counts twice.
Completed Session Participations: Contributions that met each session's completion criteria: a submitted survey, a completed 1:1 discussion, or a completed focus group.
Partial Session Participations: none recorded in included sessions.
Session Participation Rate: contributions divided by the eligible invitation base for that session. Rates are reported per session and are never averaged across sessions.
Excluded sessions (canceled, not launched, no responses, or no session report) do not contribute to any count.

Methodology:

Findings were synthesized across the two included session reports without reproducing each question or chart. Direct survey distributions and qualitative insights were separated from the discussion report's AI-derived scores. Themes were prioritized around retention, leadership and communication, coaching and recognition, collaboration, and unresolved attrition drivers. Only quotations reproduced in the source report were used, with no names, emails, or other identifying information. Session evidence was cited by Session ID, and small bases were described without population-level generalization.

Quote Verification:

2 quotes verified against the underlying responses or transcripts.

SAMPLE REPORT

© 2026 TruPulse. All Rights Reserved.

Comparability Limitations:

The sessions use different methods: S1150 is a five-response survey and S1149 is a five-contributor one-on-one discussion analyzed with AI-derived scores. Survey ratings are not directly comparable with the discussion scores, and no measures were pooled or averaged across sessions. The discussion stage received no earlier findings, so the sequence does not demonstrate change over time or causation. Small bases, repetitive qualitative wording, limited direct evidence of attrition intent, and limited discussion of benefits, workload, career development, peer collaboration, and personal impact constrain generalization.

Report Generated On:

November 10, 2026 at 12:04 AM PST
